AGENDA	A ITEMS	PRESENTER	
Predictive Services Update:		Predictive Services	
Predictive Services Update: A cold front pushed across eastern Utah late yesterday triggered a few thousand lightning strikes but also produced widespread showers and wet thunderstorms. Otherwise the rest of the region remained fairly dry with cool temperatures and above normal humidity. Warming and drying trend expected today through midweek, but this is relative to the cooler than normal conditions as temperature/RH levels will only get to near normal levels for early September. Dry west/southwest flow returns to the Great Basin and there is a concern that SW winds of 15-25 mph could affect our current large fires in Idaho by Tuesday afternoon. These increasing SW winds are due to another low dropping in from the Pacific NW. By Wednesday it should bring clouds and gradually increasing humidity, then occasional showers and isolated wet thunderstorms Thu-Sat. Lingering cool conditions thru the end of this coming weekend.
